GRADE 10 / CHEMICAL CALCULATIONS

Show your method

Assigned in a lesson or for homework? Do the task, then show your teacher or upload.
Independent revision? Use it as a self-check.

5.85 g of NaCl is dissolved to make a final solution volume of 250 cm^3. Use M(NaCl) = 58.5 g/mol.

1. Calculate the amount of NaCl in moles.

2. Calculate its concentration in mol/dm^3. Show the volume conversion.

3. In one sentence: why is the volume 0.250 dm^3, rather than 250 dm^3?

Name the substance, show your steps and include units. Half a page is enough.

Keep learning moving. Upload one clear photo/PDF if easy. If uploading gets fiddly, keep this work, show your teacher and continue. You can upload later. No download or printing is required: you can copy the task into your exercise book.
