GRADE 10 / MOMENTUM

Show your method

Assigned in a lesson or for homework? Do the task, then show your teacher or upload.
Independent revision? Use it as a self-check.

A 0.20 kg ball travels right at 6.0 m/s and stops in 0.30 s. Take right as positive.

1. Calculate its change in momentum. Include the sign and unit.

2. Calculate the average net force. State its direction.

3. In one sentence: what happens to the force magnitude if stopping takes twice as long?

Equations, substitution, answers and units. Half a page is enough.

Keep learning moving. Upload one clear photo/PDF if easy. If uploading gets fiddly, keep this work, show your teacher and continue. You can upload later. No download or printing is required: you can copy the task into your exercise book.
